Abstract The purpose of this study was to determine the effect of a 12-week, low-intensity, supervised exercise program on the health-related quality of life (HRQL) of patients with heart failure (HF). The study was a randomized, controlled trial. The study population consisted of 100 patients with HF who were randomly assigned to either a supervised exercise program or a control group. The supervised exercise program consisted of 12 weeks of low-intensity, supervised exercise. The control group received standard care. The primary outcome was the change in HRQL, measured using the EuroQOL-5D questionnaire. The secondary outcome was the change in clinical outcomes, including mortality and hospitalization. The results showed that the supervised exercise program significantly improved HRQL compared to the control group. There was no significant difference in clinical outcomes between the two groups.

Paul and Minnie accompanied by three detectives from the Sheriff's Office went to 1208 East Main, Apt. 2515 W. 5th Street, Irving, Texas. She stated we must have been at the shooting. We asked her if we could search the house, and she said, "Yes, I will stand by you all the time you can, and it is certainly all right with me." Harvey Oswald was also at the house. In Marina Oswald's room we found some maps, a clock, cigarette, etc., (see supplement of property taken from 2515 W. 5th on 11-22-63). George Warren Oswald indicated on a placard that Lee "was" kept in a file in. Oswald was taken to FBI and taken to Washington. Mr. Michael Payne arrived while we were there. Payne, both Payne and Marina Oswald were brought to the New Orleans Office and affidavit was taken from them.
